IVEN CLOUD PLATFORM

CASE STUDY

Transform business model to PSS with Iven

ARZUM, founded in 1966, is considered among the leading companies in household electrical appliances industry in Turkey.

Arzum was looking for a new income model to maximize benefits for both customers and itself. Arzum reliazed that business world is moving from traditional product-oriented model to product as a service model. With the transition, they hoped to monitor the coffee consumption in the Okka Turkish Coffee Machine.

Arzum saw that distruptive business models are emerging with IoT and IoT will have a huge impact on small household appliances industry.

Arzum decided that Iven would be the best business partner for them to integrate IoT into their business models.

"You have to integrate IoT solutions into your business to not stay behind your competitors and get a good spot on the market. Thanks to its expertise in IoT, IVEN provides everything that business partners need in this regard."

The Need

"Product as a service model means lower costs for companies in the long run. To provide a good quality service, enterprises should keep track of the service provided and resolve any problems as soon as possible" said Arif Emre Ünal.

The subscription and product-service systems is becoming a growing trend. It improves the sustainability of the product efficiency. In the near future, the one- time sale of the product will not be preferred as monthly subscribtion gives opportunity to build strong and long-term relationships with customers.

"Iven Cloud Platform is extremely secure, flexible and capable. It offers you a wide variety of report types, allowing you to tailor reports according to your need."

Arif Emre Ünal
COO at Arzum

Challenges

- One-time sale
- No after sale services
- Customers' lack of knowledge about integration steps

Goals

- Transition to product-as-a-service model
- Monitor coffee consumption
- Reduce costs in the long run
- Spreading supply-demand balance to long term

Solution

The new business model is a product as a service system where customers did not pay for coffee machine but required to make monthly subscription to the service Arzum provided with the Turkish coffee, sugar and paper cups.

Hardware Partner Ecosystem of Iven contributed to the project and helped Arzum for connecting Okka Turkish Coffee Machine to the cloud through GSM network.

Business Benefits

Product Management: Allowed creation, assignment and delegation of devices and tasks easily and rapidly.

Hierarchial Structure: Provided flexibility for Arzum to create different user types and permissions from field staff to supply chain staff.

Rule Engine: Enabled the analysis and update of delivery schedule depending on consumption and stock levels in a particular location.

Remote Controlling: Deactivating and activating the functions of the coffee machine has become instantly applicable to multiple devices. This feature made it easier for Arzum to terminate the service when the customer stops subscription or when there are problems with payment, or when there are fraudulent behaviours.

Inventory Management: Widgets supplied by Iven to Arzum's field staff, enabled Arzum to quickly record the amount of coffee, sugar and paper cups provided to customers.

Monitoring and Reporting: Coffee consumption, product usage and device related data can be tracked and exclusive reports can be generated daily, weekly or monthly.

Why Iven?

Iven offers a platform with highly detailed features that can be applied to any IoT project and easily customized to your needs. Iven also provides the security of its platform very well with three different layers of security.

Results

- Effective after sale services and increased customer satisfaction
- Determination of accurate warranty lenght of the product
- Long term recurrent revenue model
- Decrease in field visit cost

Results

According to Arzum; "IoT increases the opportunities to product-as-a -service model to be used in more areas, speeds up business processes and reduces costs more than before". IoT created a long term recurrent revenue model for Arzum.

Accurate information allowed Arzum to make effective decision-making processes by contributing to CRM, marketing, sales, R&D departments.

Best Innovation Project Award

To provide a high quality after-sale services to its customers, Arzum kept track of the service they provide and resolve any problem as soon as possible. Arzum can remotely monitor and control its devices by making its business and processes compatible with IoT and also effectively determine the warranty lenghts of the products, track consumption and bill customers on a digital platform.
